## Blood donor armchair with synchronized movement

Blood donor armchair with compact dimensions. It is equipped with four wheels; two of them are in the front side and are fixed, two are on the back side and they are swivelling and with brake. The frame is made of tubular steel varnished with epoxy powders; the seat is padded with different thickness and upholstered with soft fireproof leatherette; the back part of the backrest is made of thermoformed ABS.

The backrest is also equipped with lumbar support and it can be reclined by a lever which moves a gas spring; this movement is synchronized with the legrest.

The armrests are padded and upholstered, shaped for a better position of the arms and adjustable in all the positions.

This is possible thanks to a special clamp with different sectors; to allow an easy movement for the patient to seat, it is possible to completely recline the armrest to the back side.
