Electrical bed with adjustable height and 4-sector side rails

New FLEXO bed offers a series of functions and advantages never reached with other beds till now.

FLEXO: one bed, many possibilities!

Flexibility is the main characteristic. The bed offers various configurations both for hospital and community environments, meeting all operative and assistance needs. FLEXO is the best solution for geriatric patients and it is suitable for: INTENSIVE CARE - HOSPICE - STROKE UNIT - NEUROLOGY

Thanks to the innovative system for lateral restraint of 4-sector side rails, together with its possibility of reaching a minimum height of 29 cm, FLEXO care bed reduces fall-risk and increases guest's safety during the night notably.

The main priority of FLEXO project is patients' safety, together with a particular attention to nursing staff's needs for the care of guests.

The other important aspect, as for all Givas products, is an extraordinary refinement for design and aesthetic details.
